***RMB PRODUCTS, INC. ANNOUNCES THEIR NEW LINE OF HIGH-CAPACITY,
HIGH-PURITY PFA BOTTLES***

Fountain, CO., February 10, 2005. Historically, a large capacity bottle and the high purity, chemical inertness, and temperature resilience of PFA, have been mutually exclusive. With this new line of products RMB offers the best of both worlds. Added to this, the innovative leak proof seal consisting of a two-piece cap-and-plug design is an industry first. This feature will allow end users the flexibility to configure the cap to any hole/fitting arrangement. This combination may be used for several uses such as fluid extraction, mixing, etc. RMB Products has developed 4, 6, 8, and 10 liter capacity bottles. The company's high purity PFA bottles are compatible with a wide range of chemicals and have shown stability to thermal heat up to 200°C. RMB's state-of-

the-art molding equipment and comprehensive thermoplastic expertise allows them to manufacture these bottles to the highest rotational industry standards. These bottles and other high quality custom PFA moldings are available directly from RMB Products, Inc.

ABOUT RMB PRODUCTS, INC

For more than 30 years RMB has been foremost in innovative molding as well as lining of engineering thermoplastics. RMB specializes in custom products for the aerospace, semiconductor, chemical, biogenetic, pharmaceutical and nuclear industries.

RMB specializes in plastic process tanks with or without weirs, sump tanks, and non-metallic pressure vessels. Our proprietary resin formulations and superior processing expertise allow us to produce close tolerance precision molded parts for your high performance applications. In addition, RMB offers a full plastic welding and assembly service, which allows us to supply our customers with complete components for OEM and end use applications. Additional information can be found at www.rmb.com.
